Very thin or elongated shoots are not desirable. Economic and Operational Factors Cost and Availability – Although the biological aspects of a specific container are important, cost and availability are often the controlling factors in container selection.

Domestication of tropical trees for timber and non-timber products. The growth rate of a tree in the nursery is an important factor in the selection of planting stock. The number of years spent in the nursery seedbed by any particular lot of planting stock is indicated by the 1st of a series of numbers.

For plants grown from seeds, the establishment phase is defined as the phase of growth in which the plants are usually culled to an arbitrary limit, but, especially among bareroot stock, the range in size is commonly considerable.
