The prosthetic phase of restoring an implant requires an equal amount of technical expertise as the surgical because of the biomechanical considerations, especially when multiple teeth are to be restored. A healing abutment is attached to the implant fixture, and the flap of gingiva is sutured around the healing abutment.

Although bisphosphonates tend to accumulate in sites of active bone remodeling like the jaws, surgical trauma to the alveolar bone during implant surgery could further stimulate the postoperative accumulation of the drug in the implanted site. However, the two examiners of the radiographs and the statistician will be blinded. When a class has inherited multiple interfaces, the class has multiple vftptr pointers, which are the addresses of virtual function tables for individually inherited interfaces.
